CHOOSING
THE RIGHT
ANTIDEPRESSANT

Personalise antidepressant Treatment for
Unipolar depression combining individual
choices, risks and big data

The **PETRUSHKA trial** aims to assess a **personalised** approach to antidepressant treatment for adults with depression in the NHS using the **PETRUSHKA tool**, a web-based app for shared decision making between patient and clinician.

The **PETRUSHKA tool** combines the most innovative technology with individual preferences, to predict which antidepressant works best for each patient, using **an evidence-based approach**.
